Jennifer,

You are correct we use iodine for eggs. We do not use any of the chemicals you listed. Chloramine T has never been used but could be prescribed in the future by our vet.

Hi Malenna and Travis,

Thanks to both of you for information on the hatchery this Monday. I had a couple of questions on the chemicals used at the hatchery. As we talked about on Monday, my understanding is that the hatchery applies some iodine-povidone during incubation and formalin in the rearing ponds. I wanted to confirm that the hatchery doesn't use potassium permanganate, chlorine, or chloramine-T in your operations, though there's a monitoring requirement in the permit in case the hatchery uses chlorine-related projects.
